Other sizes of recycled dimensional lumber from 2x8 to 6x10 are sometimes available. Let us know what you're looking for and we can check availability.

PLACE

Every year, more than 500,000 TONS of clean wood are discarded from construction jobsites in Oregon alone. We are partnering with Sankofa Lumber to change that. Sankofa processes wood waste from new construction into reusable, FSC Certified Recycled lumber in Portland Oregon.

PURPOSE

Recycling and reusing this wood waste is climate-smart, storing the embodied carbon when this wood is built back into buildings, reducing the need for new material and supports a local minority woman entrepreneur. Perfect for less than standard length studs in window & door framing, plating, blocking, temporary forms and more.

Meets Oregon Residential Building Code R104.9.1 and Washington Residential Code R602.1.1.1

PEOPLE

Sankofa is a Minority Woman Owned Business, whose founder Valerie Carey is on a mission to reduce waste, create local jobs and close the loop on a circular economy. She employs a variety of disenfranchised people to give them a leg up, providing training and mentorship, and the skills for a better future.
