

EXTERIOR SIDING

Sustainable Northwest Wood offers a wide variety of exterior siding products for residential and commercial projects. We custom-mill FSC Western Red Cedar and Restoration Juniper lumber into shiplap, tongue-and-groove, and other siding profiles for durable, beautiful, and sustainable exterior finishes. We are also able to provide our siding pre-stained and pre-finished for a quick and easy installation.

PEOPLE & PLANET

All of our Western Red Cedar is certified by the Forest Stewardship Council and is harvested from forests in the Pacific Northwest. These projects strategically thin the forest to reduce the number of trees per acre, opening up the forest canopy and allowing the remaining trees to grow to their full potential.

Restoration Juniper comes from rangeland restoration projects in Central and Eastern Oregon. Juniper is a native species, but decades of fire suppression have allowed it to take over what was formerly a grassland ecosystem. As a result, many acres of juniper are now being harvested, restoring groundwater supplies and essential habitat for endangered species like the sage grouse.

AVAILABILITY

- » Western Red Cedar is available in Select Tight Knot grade
- » Juniper siding is available in #1 grade
- » Ship-lap, tongue-and-groove, bevel, and other styles available
- » Standard 1x6 and other custom sizes are available
- » Surfaced and band-sawn finishes
- » Pre-stained and pre-finished options
- » Coordinating trim pieces and accents available
